About me

As a web developer graduated from a bachelor's degree in multimedia and the internet, I create applications and websites where functionality and design combine. I alternate between developing for the front end and the back end, and when life drops me lemons, I always find a way to make lemonade out of it. I'm all about breathing life into ideas while soaking up new technologies on the way. Currently on the hunt for opportunities to push my web development game further.

Hobbies

Indoor climbing

Drawing

Video Games

Manga
